## 1 Scope

This document provides additional information to part 3 of the PC/SC specification for IFD subsystem implementers. It contains vendor- and product-specific information, which is subject to frequent updates, and is therefore provided as a separate document.

## 2 Storage-Card ATR Relevant Information

This section defines fields of the Storage Card ATR that are likely to change (to be extended) in the future. It shall be noted that existing definitions remain the same.

### 2.1 AID Definition

The bytes are listed from lowest to highest index.

#### 2.1.1 RID

This is the *Registered Application Provider Identifier*. The PC/SC Workgroup has its own 5-byte RID:

B[0]	B[1]	B[2]	B[3]	B[4]
A0	00	00	03	06

The specification mandates to use this RID for compliant IFD subsystems.

#### 2.1.2 PIX

##### 2.1.2.1 SS - Byte For Standard

This describes the standard a Storage Card (that has been detected by the IFD subsystem) is working under.

### 2.1.2.3 RR RFU Bytes

These bytes are RFU. They have to be zero.
